

ENFOLDER

Designed to fold documents with plastic cards attached. It can be used as a stand alone unit or in-line to most plastic card attaching systems on the market. It cycles at up to 3500 per hour handling documents with 1 to 4 cards attached. It can provide Z-fold, C-fold and half-fold using interchangeable cassettes. The touch screen control provides an error position display and facilitates the addition of on-line equipment.

EFFICIENT FOLDING OF DOCUMENTS WITH PLASTIC CARDS ATTACHED

ENFOLDER

EFFICIENT FOLDING OF DOCUMENTS WITH PLASTIC CARDS ATTACHED

The Enfolder is fully compatible with the Mailmaster range of envelope inserters, manufactured by KAS Paper Systems, and acts as an interface between card attaching equipment and the inserting system. Thus enabling the printing, card attaching, folding, inserting and sealing to be done in the same process. Insert stations on the enveloper can be selected to add further documents which could be single sheets, prefolded items, books or CDs.

KAS Paper Systems can also incorporate their reading, tracking and integrity software. The documents can be read on entry, tracked through the system and read again at the exit.

The run data is transferred to the reporting package which will give a real time on screen listing of documents processed, time of insertion and enclosures selected. An error control program can be set to a number of levels and outsort errors away from the main output conveyor stacker.
