

Case Study

Mikro + Repro AG relies on inserting solution from Kern AG

Short description

Customer

Mikro + Repro AG, Dättwil

Business

Document solutions

Country

Switzerland

Implementation period

Autumn 2020

Product / solution

Kern 2600

Technical advantages

- Fast processing time
 - Stability
 - Good support
-

Company description

Until the management buy-out in 1992, today's Mikro + Repro AG was a subsidiary of ABB Schweiz AG and was responsible for duplication, printing and microfilm as a central service division.

Today, Mikro + Repro AG is an independent company and supports its customers with comprehensive services for analogue and digital media. 35 dedicated employees guarantee full service from a single source.

Situation / Challenge

- Mikro + Repro AG previously operated a production line with a Kern 1600 inserting machine.
- Mikro + Repro AG can now further expand its capacities based on the existing know-how of its employees in the field of transactional printing.

Solution

- Installation of a K2600 system in addition to an existing Kern 1600
- At the beginning of December 2020, a second production line went into operation at the Baden-Dättwil site with the additional Kern 2600 inserting system, expanding processing capacity to around 25,000 envelopes per hour.

Future

Expansion of the customer base in Switzerland for medium-sized and large companies

Cooperation

- The Kern company works closely with its customers and understands their needs very well. As a result of this close collaboration, the best solution for further expansion was actively sought together.
- Professional approach to planning, installation and training for the installation of the new inserter.
- Very reliable, fast service network within Switzerland, so that production downtimes can be prevented.
