

Cutter Kern 996_{basic}

Short Description

The high-performance cutter K996_{basic} offers a strong cutting performance, simple operation and high reliability at an interesting cost-benefit ratio.

Comparison K996_{basic} / K996

K996_{basic}

This version is limited to a maximum processing capacity of 48'000 documents/h (12", 2-up). With the appropriate software license an extension to normal performance (additional costs) is possible.

The options Duplex Matching, White Paper Processing, grouping and diverting station are not possible with the K996 basic version. An implementation of this functionality mandatorily requires an upgrade to standard version K996.

K996

The efficiency of this standard version is 66'000 documents/h (12", 2-up).

 P000731 License for upgrade to
 standard version K996

Product overview

The cutter K996_{basic} can be combined with the series K2500, K2600, K3500 SL, K4300 and K4700 as well as a roll unwinder or stack connector.

The basic version meets all the requirements of a high-performance continuous form cutter in a simpler version. Simple operation and high reliability are central elements of the device. The cutter is combinable with all known Kern systems, handles a large variety of applications and is rapidly ready for operation. The ergonomic design and the touch screen interface allow quick access to the system. The retraction of the paper is carried out automatically and accelerates the setup. In addition the paper flow is clearly visible and easily accessible, adjustments require just little time. In addition all common standard codes such as Barcode, Datamatrix or OMR can be processed securely throughout the entire format range.

The basic version is limited in performance and functionality. With an appropriate software license (additional costs) an extension to normal performance characteristics is possible. The use of the full K996 functionality requires a mandatory upgrade to the standard version.

Our services

- Personal consulting on site
- Requirement analysis
- Working out an optimal solution
- System integration
- On-site training of your employees
- Comprehensive support during the operational phase
